

DAY – 81

27 November 2025

The error is correct — **langchain_community.document_loaders** is **NOT** a pip package. You are trying to install a *module path*, not a package.

Correct Package Name

You need to install:

```
pip install langchain-community
```

Then you can import document loaders like:

```
from langchain_community.document_loaders import PyPDFLoader
```

Why Error Came?

Because this is **WRONG**:

```
pip install langchain_community.document_loaders ❌
```

Pip can only install **packages**, not internal module paths.

Do This:

Run:

```
pip install langchain-community
```

```
pip install langchain
```

Then test:

```
from langchain_community.document_loaders import PyPDFLoader
```

```
loader = PyPDFLoader("file.pdf")
```

```
docs = loader.load()  
print(docs)
```

Wrong Command

```
pip install langchain.chains
```

There is **NO** package named langchain.chains.

Correct Command

You only need to install:

```
pip install langchain  
pip install langchain-community
```

How to import chains correctly

After installation, you can import chains like this:

```
from langchain.chains import LLMChain
```

Or for other chains:

```
from langchain.chains import SimpleSequentialChain
```
